### Issue

- A number of people interested on doing stuff together
- No persistent location available

How do they get together?

### Issue

- A number of people interested on doing stuff together
- No persistent location available

How do they get together?

### A piece of software – Database

- Setup your Database
  - Locations (e.g. \$bar, \$place)
  - Categorize the locations what you can do in the locations

### A piece of software – User action

- \$user registers and specifies:
  - When \$user has time
  - What \$user wants to do
- Depending on the registration the system notifies the \$users when and where to get together

### A piece of software – Database

  - Categorize the locations what you can do in the locations

### A piece of software – User action

- \$user registers and specifies:
  - When \$user has time
  - What \$user wants to do
- Depending on the registration the system notifies the \$users when and where to get together

## Implementation

- Splitted up:
  - One backend
  - Several (serverside) clients
- Written with node.js and postgresql
