SANDSTORM

WHO AM I?

- Developer, recently doing AppSec
- Not a core Sandstorm dev
- But I did hack together a quick app
- So this talk will be from that perspective

There are unix tools for everything

UNIX

OS is responsible for:

- User management
- Document management
- Permissions
- App installation
- Basic security

UNIX

App is responsible for:

- STDIN → STDOUT

MODERN WEB

App is responsible for:

- User management
- Document management
- Permissions
- Deployment
- All security

MICROSOFT WORD → LIBREOFFICE

GOOGLE DOCS → ???

SANDSTORM

- Apache 2 Licensed
- Runs apps in containers
- Hosted by anybody

HACKER SLIDES

- (Ace Editor + RevealJS) × Browser
- Write slides in markdown, with live preview
- http://tiny.cc/m1vw1x

I DIDN'T HAVE TO:

- Implement Login / Account recovery
- Think about document management
- Implement sharing
- Maintain a public server
- Stay up all night worrying about security

COME TO OUR WORKSHOP!

- Q/A and more demos
- 17:00 at NOPE (near C-Base)
- (right after these lightning talks)
